

# Macbook Pro - Development machine

## Code managed installation

<https://github.com/Strat1987/mac-install>

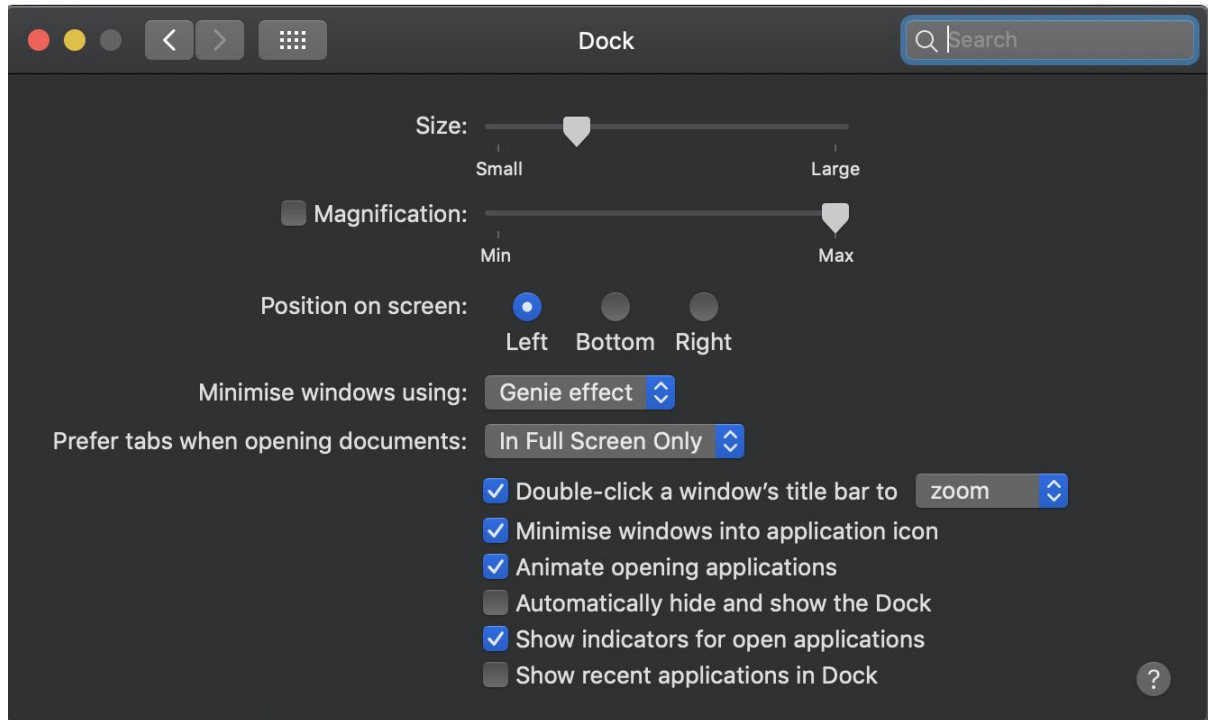

## System Preferences

### General

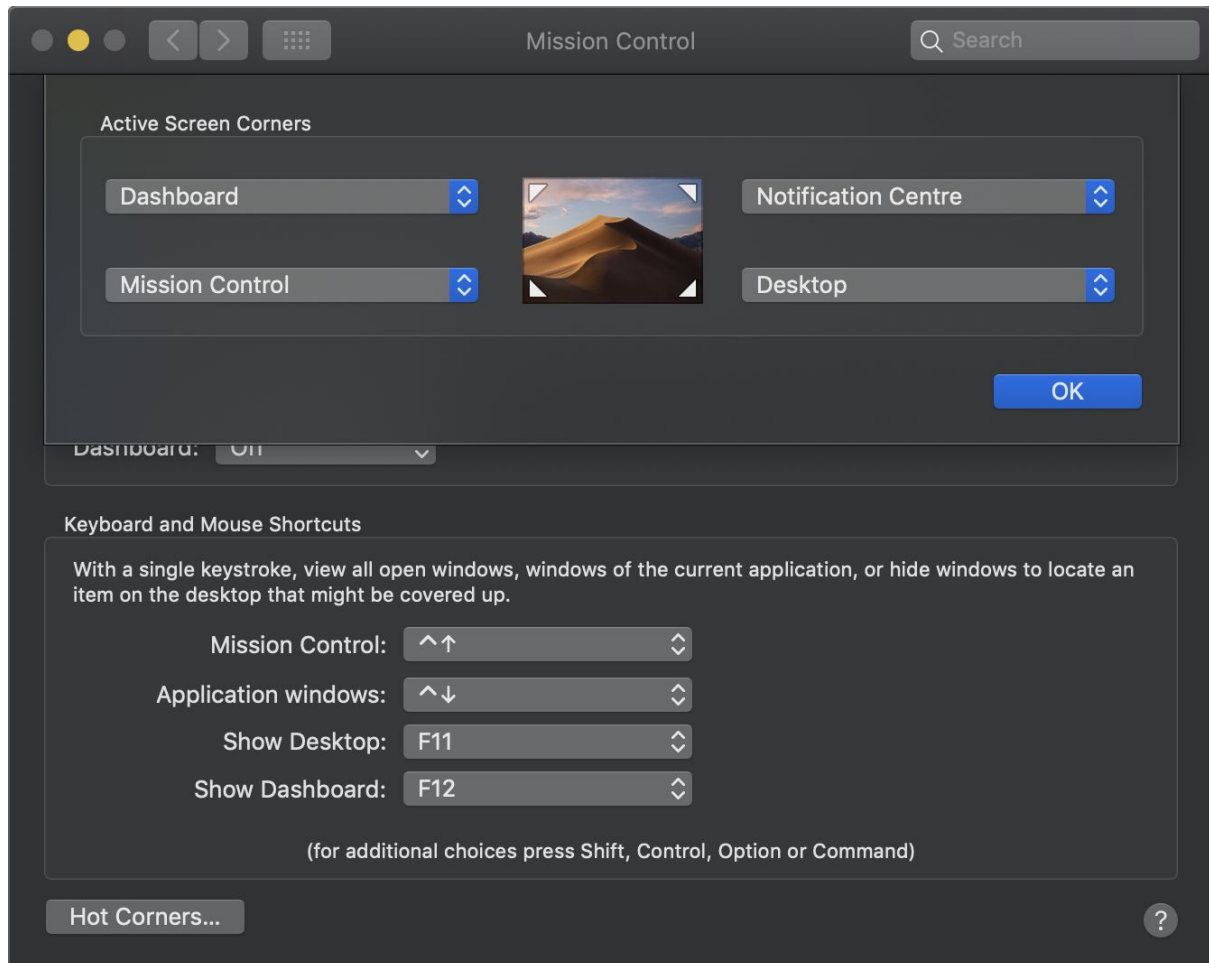

- Use dark mode

# Dock

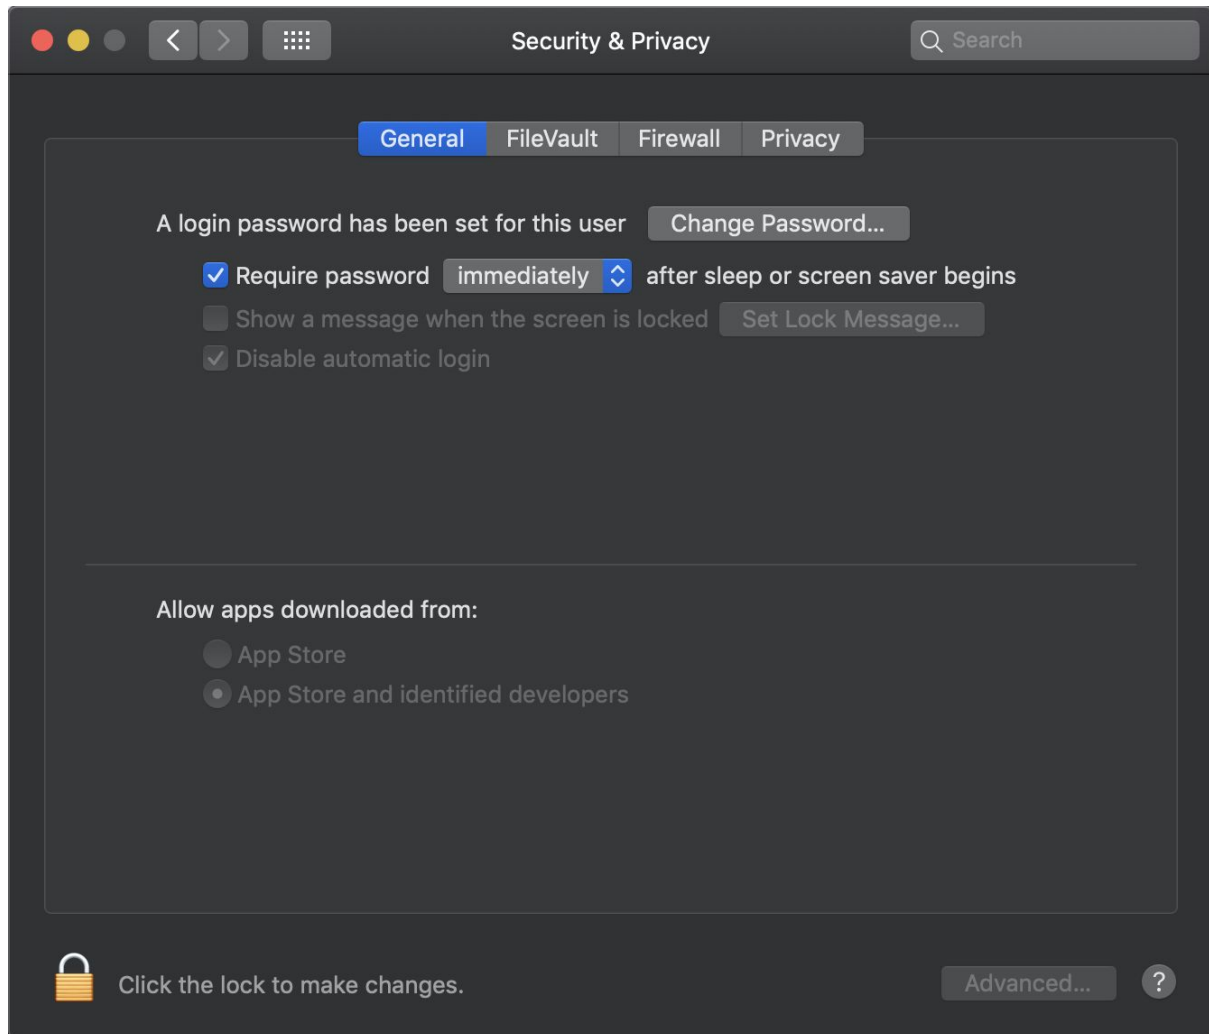

- Smaller Size
- Position to the left
- Minimize windows into application icon

## Mission Control

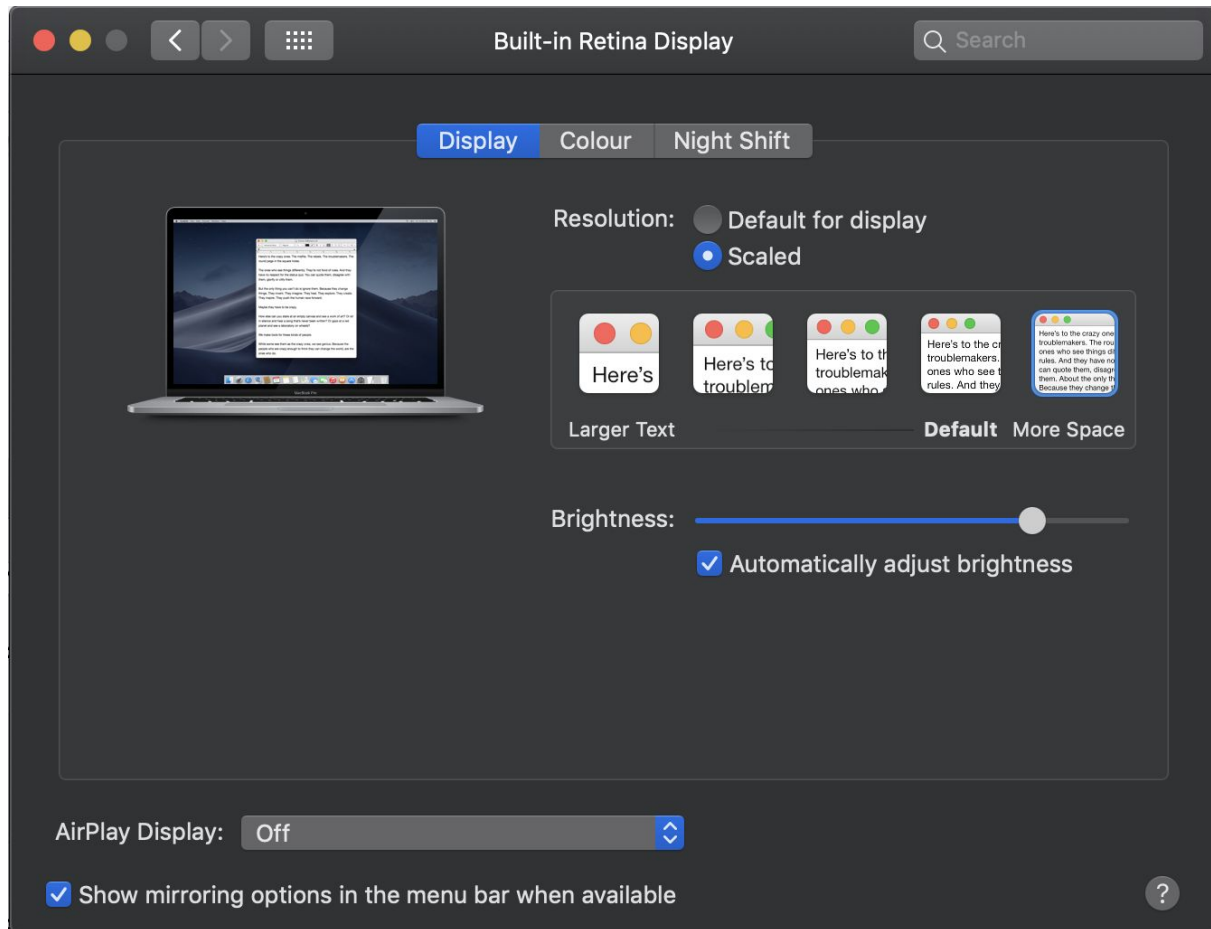

- Set Hot Corners (should be automatically set by <https://github.com/Strat1987/mac-install/blob/master/scripts/configuration-osx.sh> line: 145-175 e.g: defaults write com.apple.dock wvous-tr-corner)

## Security and Privacy

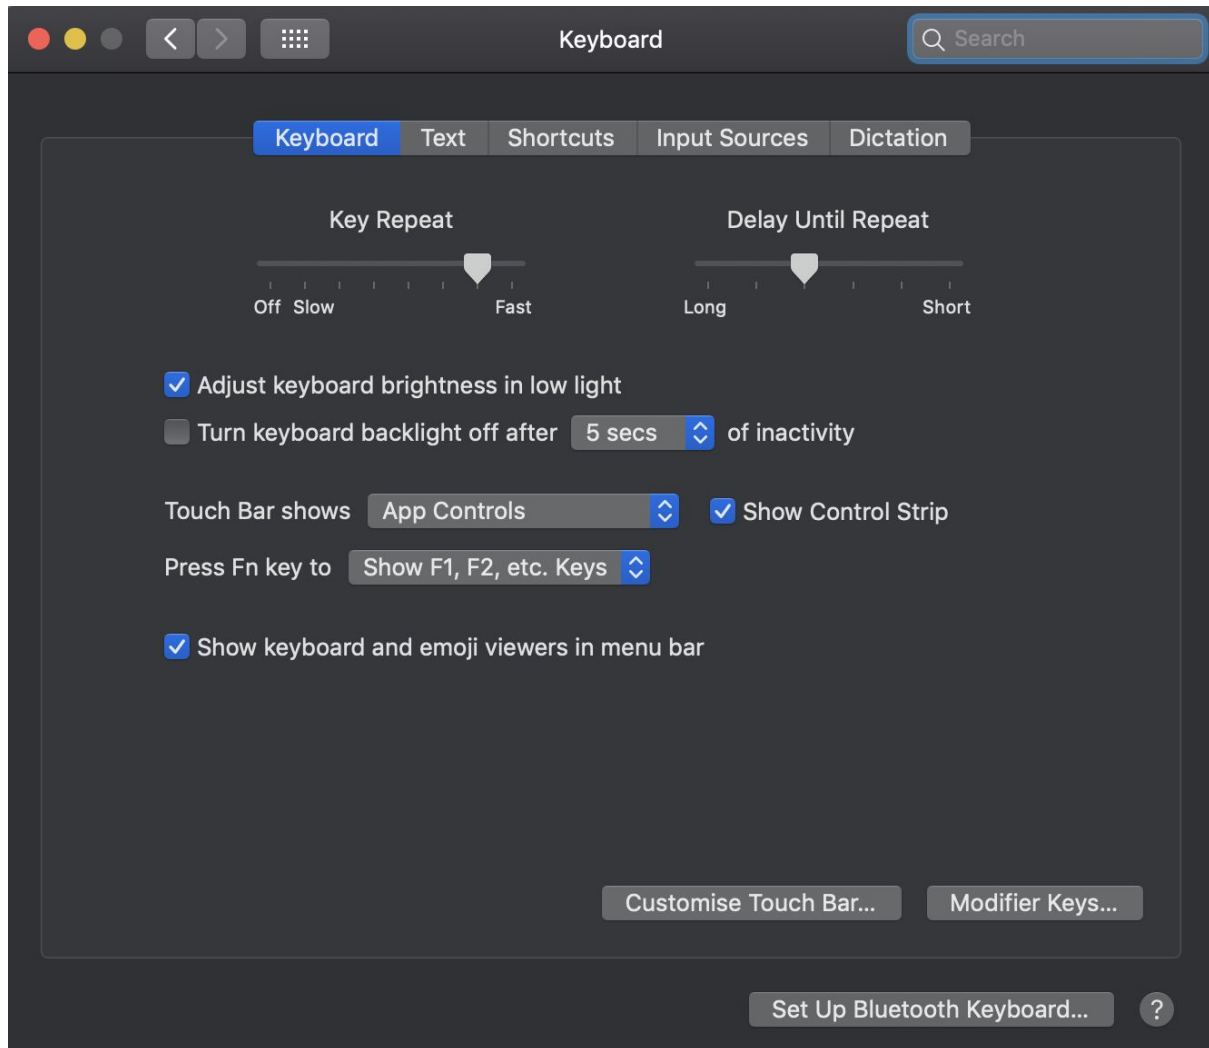

- Require password immediately after sleep or screen saver begins

# Displays

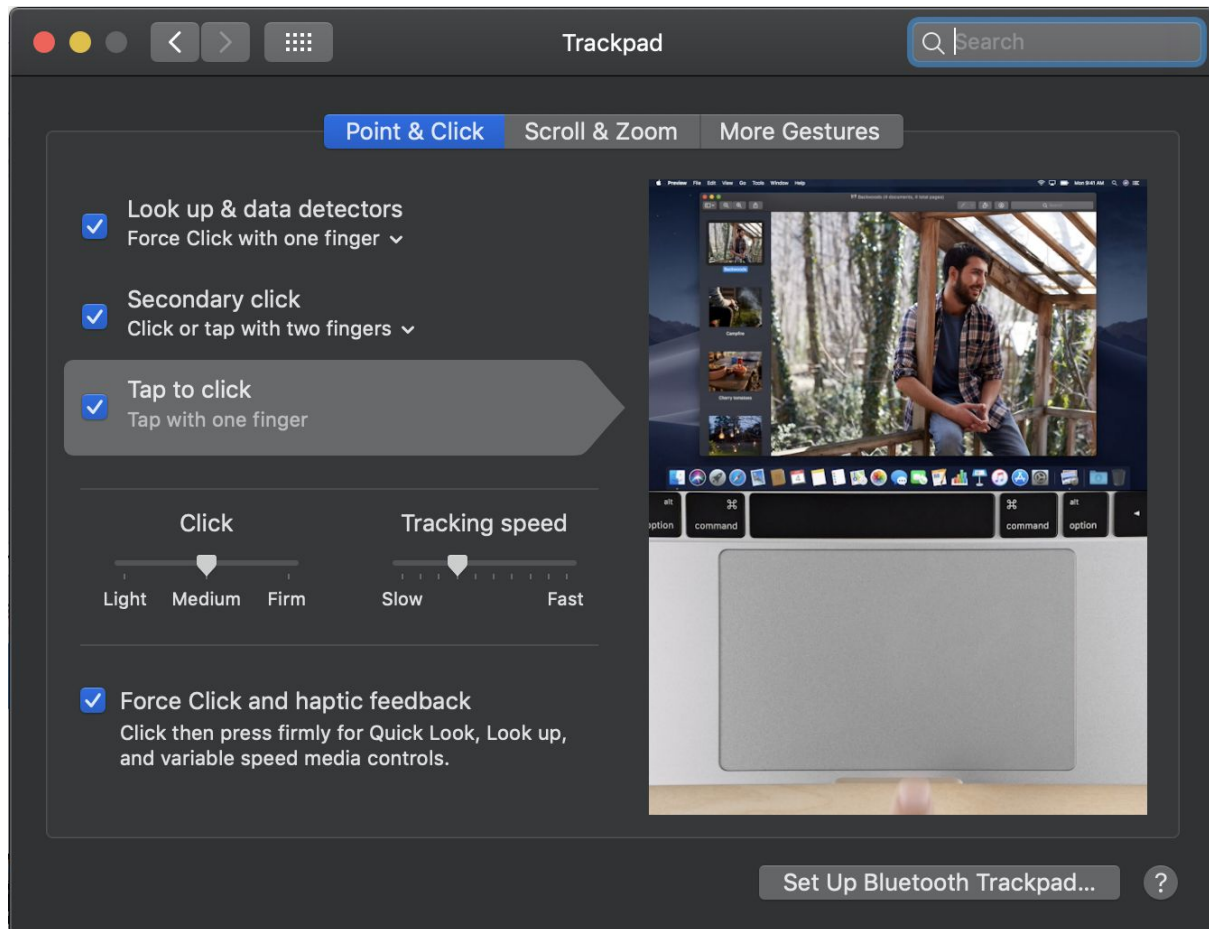

- Switch resolution to 'Scaled' and choose the 'More Space' option

# Keyboard

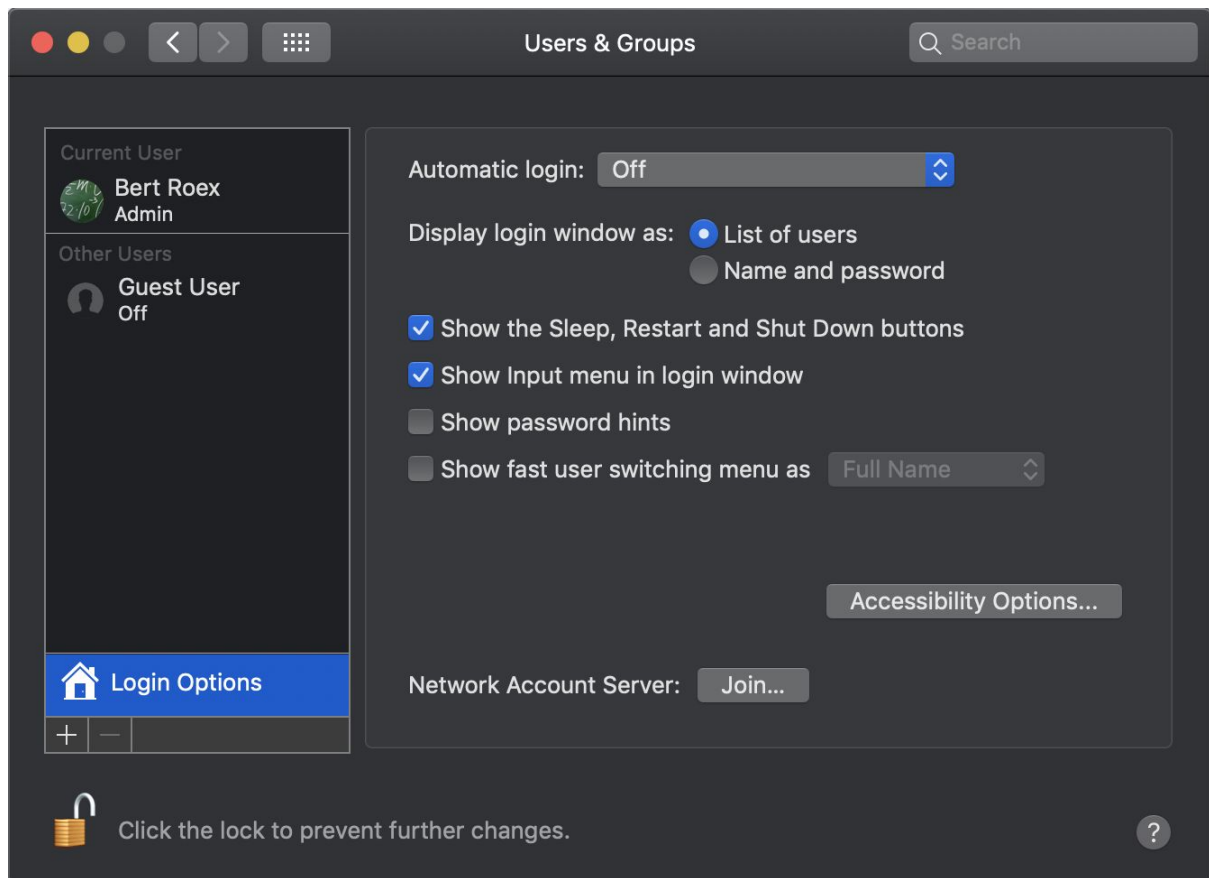

- Show keyboard and emoji viewers in menu bar
- Customize Touch Bar...
  - Play/Pauze | Audio +/- | Mute | Sleep

# Trackpad

- Tap to click

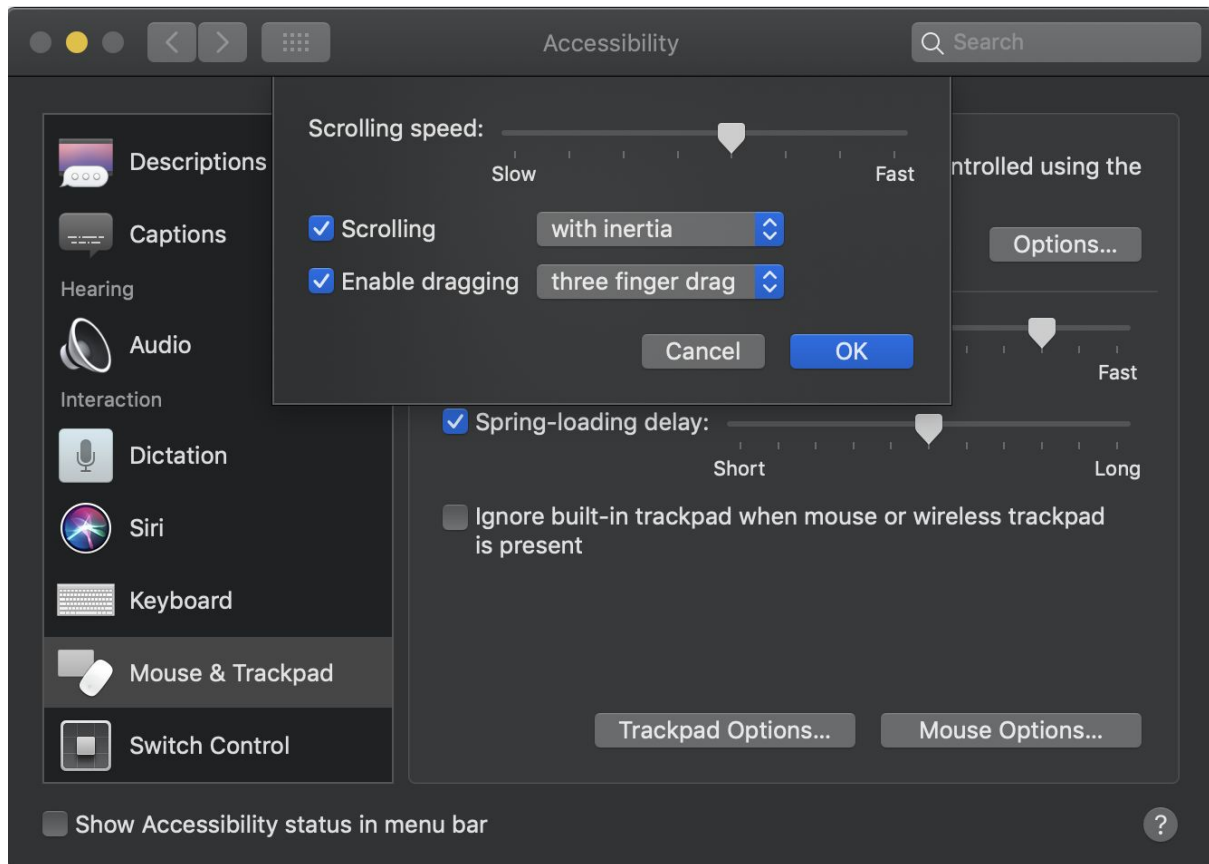

## Users & Groups

- Show Input menu in login window  
(to enable keyboard layout QWERTY/AZERTY switching in boot login screen)

# Accessibility

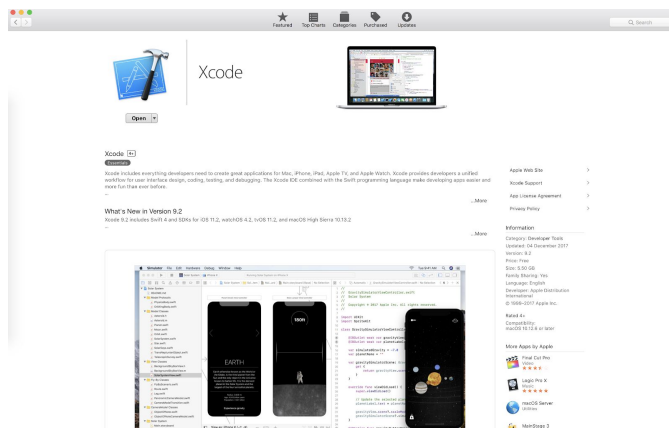

- Enable dragging **three finger drag**

# Update system

Open app store - go to - Updates - Update all (might require multiple restarts)

## Install Xcode

Open app store - search for 'xcode' in the top right corner  
Install xcode by clicking the GET link

## Install using [brew](#) and apps using [brew cask](#)

<https://github.com/Strat1987/mac-install/blob/master/README.md>

# Check your brew installation

brew doctor

1. needed to add /usr/local/sbin to PATH export in ~/.zshrc file
2. needed to brew install lz4 # <https://github.com/lz4/lz4>

# Useful commands

brew search	=> Look for package / app
brew update	=> update the repo
brew outdated	=> check for outdated packages
brew cask outdated	=> check for outdated apps
brew upgrade	=> upgrade the outdated packages
brew cask upgrade	=> upgrade the outdated apps
